

Euromix™ Architectural Finish products; Render, Patch, Texture, Paint and Gypsum Plaster; have been the first choice of leading professional renderers, painters and plasterers for over 30 years now.

Each render in the Euromix™ Render Range, has been formulated and manufactured, to be easy to apply, extremely durable, and; most importantly for an architectural finish; to remain aesthetically pleasing to the eye.

Building designers, engineers, owners and construction managers, confidently specify Euromix™ Render, knowing that their selected Euromix™ Render product system will meet the particular coating expectations for their project.

Euromix™ has a proven, high performance, render solution for all the commonly accepted building substrates and cladding systems used in new, renovation and refurbishment projects, in Australia and New Zealand.

**DESIGNED AND MADE  
FOR AUSTRALIAN CONDITIONS**

## Euromix™ Render

Euromix™ Render is a versatile cement-based render suitable for application by hand over most substrates in residential construction, as a low/medium build base coat. Render can also be float or sponge finished as a topcoat.

## Euromix™ Cream Render

Euromix™ Cream Render is a cement-based render that is best suited as a medium/high build base render over a wide range of substrates in both residential and commercial buildings.

Usually applied by hand, Cream Render can also be sprayed over masonry substrates.

## Euromix™ Skim Coat

Euromix™ Skim Coat Render is designed to be used as a finishing coat over base render or other finished surfaces. Euromix™ Skim can be applied in thicknesses from 2 to 3mm and can be floated to a smooth flat finish or sponged to give an even textured finish.

## Euromix™ Full Polymer Render

Euromix™ FP Render is a dry mix, full polymer, and cement render - no added bond required in the mixing.

Particularly suitable for application over sheet and panel substrates, like AAC, polystyrene (EPS, fibre cement (FC) and plaster-based materials. Euromix™ FP Render is also suitable for application over masonry substrates.

## Euromix™ LWHB (Light Weight High Build)

Euromix™ LWHB Render a full polymer render that can be applied by hand or machine, as a high build base coat over most substrates in residential or commercial building.

Particularly suited to rectification of misaligned and/damaged substrates. High adhesives allows high build thicknesses due to special low weight fillers and chemicals.

Boasts up to 40mm thickness!\*

## Euromix™ NPS Keycoat Base Render

Euromix™ NPS Keycoat Base Render is a full polymer render that can be applied by hand or machine, as a medium build base coat over nonporous substrates like, PVC, EPS and Fibre Cement. It can also be used as a keycoat on difficult substrates as a base render.

## FINECOAT

Euromix™ Fine Coat is a premixed polymer-based texture coating designed for decorative finishing over Euromix™ Renders and other substrates. A premium quality, high build 100% acrylic texture coat, manufactured with special graded sand, fillers and other chemicals. The typical grain size (the aggregate used to achieve the textured finish) for Finecoat is 0.5mm diameter. Tintable to all colours, coverage approx 17 SQM.

## SANDSTONE

Euromix™ Sandstone is a premium quality 100% fully acrylic texture coating, manufactured with special graded sand, fillers and other chemicals. A premium quality, high build texture coating, manufactured and designed in Australia to provide a durable, protective and decorative finish. Sandstone grain size is approx 0.9mm in diameter. Tintable to all colours, coverage up to 15 SQM per bucket.

## SAND FINISH

Euromix™ Sand Finish is coarse 100% acrylic based texture coating designed for decorative finish over Euromix™ Renders and other substrates. A premium quality, high build texture coating, manufactured and designed in Australia to provide a durable, protective and decorative finish. Sand Finish grain size is approx 1.0mm in diameter. Tintable to all colours, coverage up to 14 SQM per bucket.

## Euromix™ Acrylic Primer

A water based penetrative primer. Off-white at the time of manufacture, Euromix™ Acrylic Primer can be tinted To achieve a desired colour - usually to match the colour of subsequent coatings such as render or texture.

Euromix™ Acrylic Primer is generally applied by brush, roller, or sprayed as a surface primer over internal or external wall surfaces to enhance the adherence of acrylic and other water-based coatings.

## Euromix™ NPS Primer

Euromix™ NPS Primer is a solvent free primer, designed specifically For use on nonporous surfaces like, PVC, metal, glazed bricks, high density concrete and most fired tiled.

NPS Primer provides an excellent base for the application of Euromix™ Renders, Textures, and Paints over non-absorbent surfaces.

## Euromix™ Solvent Sealer

A clear solvent-based primer and sealer, which when applied correctly, provides a highly water-resistance penetrative film, suitable for use on most porous Building substrates.

Euromix™ Solvent Sealat is also suitable as a clear waterproof Sealer that improves resistance to the ingress of rainwater and salt spray.

## Euromix™ Flex

Euromix™ EuroFlex is a tough pure acrylic elastomeric membrane coating. IT is most often used as the final-coloured topcoat over render and texture coated surfaces to provide an effective waerproofing barrier that also breaths - allowing vapor to escape from the substrate.

## Euromix™ Matt

Euromix™ Paint Matt is a high performance, high build, water based acrylic, protective paint coating for interior and exterior surfaces.

## Euromix™ Bond

Euromix™ Bond is a liquid additive formulated to increase the adhesion, compressive and chemical strength of Euromix Renders. Bond is added to water in various ratios dependent on the type and condition of the substrate (to 'form a 'gauge').

## Euromix™ AAC Hebel Adhesive

Euromix™ AAC Hebel Adhesive is an off-white cement-based adhesive which has been specially formulated for Bonding lightweight AAC Hebel panels and blocks.

## Euromix™ Patch Coarse

A pre-mixed, water based, jointing and patching compound manufactured with premium quality fillers and polymers. Patch Coarse n Flex is a ideal patching compound as a pre-mixed polymer render where lowere builds are required.

## Euromix™ Patch Fine

A water based, fine build topping and patching compound manufacturerd with premium quality fillers and polymers. Euromix™ Patch Fine is ideal for rectification work, facing and general preparation of substrates that require a smoother, fine topcoat finish (particularly where paint is to be applied).
